

Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

- 5 1 (currently amended): A method of providing device-dependent print data to a printer
by a computer system, the method comprising:
providing the computer system with an operating system having an upper layer
for controlling a graphical device interface, and a lower layer for
controlling input/output activities;
- 10 utilizing a printer manager of the computer system for generating print data, the
printer manager comprising a user interface for configuring the printer
manager and a device-dependent converter for converting input data into
device-dependent output data that is suitable for a first type of printer but
not suitable for a second type of printer according to configuration
- 15 information received from the user interface;
- providing encoded data to the printer manager;
the printer manager decoding the encoded data to generate raw data, and
utilizing the converter to convert the raw data into the device-dependent
print data without utilizing the upper layer;
- 20 providing the device-dependent print data to the lower layer; and
the lower layer of the operating system outputting the device-dependent print
data to the printer, the printer being the first type of printer.
- 25 2 (original): The method of claim 1 wherein the converter converts the raw data into
gray-level image data and converts the gray-level image data into the
device-dependent print data.
- 30 3 (original): The method of claim 1 wherein the converter converts the raw data into
cyan-magenta-yellow-black (CMYK) image data and converts the CMYK image
data into the device-dependent print data.

4-5 (cancelled).

6 (original): The method of claim 1 wherein the encoded data is stored in a joint
5 photographic experts group (JPEG) format.

7 (original): The method of claim 1 wherein the encoded data is stored in a graphics
interchange format (GIF).

10 8 (original): The method of claim 1 wherein the encoded data is stored in a bitmap
(BMP) format.

9 (original): The method of claim 1 wherein the encoded data is stored in a tag image
file format (TIFF).
